## About Rockwood Manufacturing Company

Rockwood Manufacturing Company, founded in 1946 by the Gurzenda Family in rural southwestern Pennsylvania, focuses on the design and manufacture of quality builders' hardware for commercial, institutional and finer residential buildings. Now in the third generation of skilled craftsman, we continue to develop new products and processes that improve our offering. Strict attention to detail from the selection of top-grade materials to the application of the finest finishes results in a tough, yet handsome product of the highest caliber.

In 2008 Rockwood Manufacturing Company was purchased by ASSA ABLOY, the global leader in door opening solutions. This greatly expanded design and development capabilities and expanded the product offering to customers. This offering includes many coordinating products with other ASSA ABLOY Group companies through the Good Design Studio.

## Custom Designs

Design your own hardware! Whether it is a modification of a standard product or a completely unique design, we will quote your design and offer suggestions for best mounting applications. We take special pride in our custom products. For more information, please contact our sales staff.

## Rockwood Architectural Door Pulls

The alluring warmth of warm wood, smooth leather, clean and appealing lines. Just a few words to describe our beautiful architectural door pulls. With endless design options to choose from, our pulls will add contemporary beauty to any door opening.

## LEED Certification Contribution

ASSA ABLOY can help to achieve prerequisites and accumulate points in several categories and credit areas of LEED. When you select a Rockwood stainless steel door pull for your LEED certified building project, you are using a product that is made from a minimum 75% post industrial waste and is 100% recyclable. Additionally these pulls can usually be refinished to their original appearance any time in the life of the building, eliminating the need for replacement when a renovation is conducted. ### US32DMS (MicroShield®):

As part of its promise to provide innovative solutions to their customers, ASSA ABLOY Group companies offer the MicroShield® technology, a silver-based antimicrobial coating designed to inhibit the spread of germs and bacteria.

### US32316 and US32D316:

Made from alloy 316 stainless steel containing molybdenum and extra nickel giving it substantially higher corrosion resistance than the standard stainless steels typically used in door hardware. This finish is ideal for use in coastal, urban, and industrial areas that have harsh environmental conditions. 32316 (polish) finishes offer the best corrosion resistance and should be used in caustic environments.

## Finish Tips

### Polished Brass

Polished brass is a beautiful finish that does not normally weather very well outdoors. Rockwood products use a very durable baked on clear powder coat on most door pulls and push bars. In indoor usage, this finish is extremely durable.

### Stainless Steel

Stainless steel is one of the most durable materials used in architecture; however there are many types with different properties and different levels of corrosion resistance. In most indoor (except chlorine and other harsh chemical exposure) and many outdoor (mildly corrosive) environments our standard stainless steel will perform exceeding well. It is best maintained by periodic water washing. If your job site has road salt, marine salt air, industrial, or urban pollution, we recommend the use of molybdenum bearing alloy 316 stainless steel. Specify US32**316** or US32D**316**. To enhance the corrosion resistance of stainless steel, use the polished finish (US32) in place of the satin finish (US32D). Minute particles of dirt and debris can lodge in the microscopic crevices of the satin finish more readily than on a smooth surface promoting corrosion. The mirror smooth surface of the polished finish has no rough surface to retain microscopic dirt or debris.

### Heat Resistant

Exterior hot sunny climates call for a finish that is resistant to heat. We recommend our white powder coat finish (WPC). This durable exterior finish reflects much of the heat rays and is substantially cooler to the touch than stainless steel or other finishes.

### Anti-Microbial Protection

MicroShield® (US32D**MS**) is the ideal finish for hospitals, schools, laboratories, assisted living facilities, public restroom areas, and anywhere there is a concern to control bacteria growth for demanding standards of cleanliness. Contact our customer service department for more detailed information.

### Finish Sample Displays

Educational and informative displays are available showing our most popular finishes.

## How to Size Push Bars

### Flush Doors

Door width:

- Minus 5" for bent end bars
- Minus 5" for square end post mount bars
- Minus 7" for round end post mount bars

### Stile and Rail Doors or Doors with Lites

Door width:

- Minus width of one stile

**CAUTION:** Always confirm bars will not interfere with jamb or cause pinching hazard.

**CAUTION:** On narrow stile doors, be sure push bar base fits on the stile and bar does not interfere with the stop.

## Handing of Doors

The handing of a door is determined from the outside of the opening.

Standing outside the door:

- If the hinges are on the right, it is a right hand door
- If the hinges are on the left, it is a left hand door
- If the door opens away from you, it is a regular bevel door
- If the door opens toward you, it is a reverse bevel door

## T Series 1" Tubular Push Bars and Push & Pull Bar Sets

The Rockwood T Series 1" diameter tubular push and pull bar sets are made from sturdy .065" thick wall tubing. Solid brass or stainless steel inserts are brazed into the ends to provide a solid area for our guaranteed mounting systems.

Benefits of specifying the T Series push and pulls include:

- Tubular pulls weigh 25% less than their solid counterparts; this 75% weight reduction greatly reduces the environmental impact of harvesting material for their manufacture – a LEED certified building goal
- The lighter weight minimizes the risk of damage in shipping and handling
- The cost of most tubular pulls represents a significant savings over the equivalent solid model

Considering all the benefits, the T Series pulls offer an improved value without any quality sacrifice.

T Series is also available in straight pulls (see page B15) and offset pulls (see page B29).

## T Series 1" Tubular Pulls

Rockwood T Series 1" diameter straight tubular pulls are made from sturdy .065" thick wall tubing. Solid brass or stainless steel inserts are brazed into the ends to provide a solid area for our guaranteed mounting systems.

Benefits of specifying the T Series push and pulls include:

- Tubular pulls weigh 25% less than their solid counterparts; this 75% weight reduction greatly reduces the environmental impact of harvesting material for their manufacture – a LEED certified building goal
- The lighter weight minimizes the risk of damage in shipping and handling
- The cost of most tubular pulls represents a significant savings over the equivalent solid model

Considering all the benefits, the T Series pulls offer an improved value without any quality sacrifice.

T Series is also available in offset pulls (see page B29) and in both Series 47 push bars and push & pull bar sets (see pages A19–A21).

## T Series 1" Tubular Pulls

The Rockwood T Series diameter offset tubular pulls are made from sturdy .065" thick wall tubing. Solid brass or stainless steel inserts are brazed into the ends to provide a solid area for our guaranteed mounting systems.

Benefits of specifying the T Series push and pulls include:

- Tubular pulls weigh 25% less than their solid counterparts; this 75% weight reduction greatly reduces the environmental impact of harvesting material for their manufacture – a LEED certified building goal
- The lighter weight minimizes the risk of damage in shipping and handling
- The cost of most tubular pulls represents a significant savings over the equivalent solid model

Considering all the benefits, the T Series pulls offer an improved value without any quality sacrifice

T Series is also available in straight pulls (see page B15) and in both Series 47 push bars and push & pull bar sets (see pages A19–A21).

## Mortise Door Edges No. 300, 301, 302, 302B

**Material:** .050" brass, bronze, stainless steel

**Finishes:** Available in standard architectural finishes, US32DMS, US32D316, prime painted steel (see page 9)

**Fastener:** #6x<sup>5</sup>/<sub>8</sub>" FH SMS

**Ordering:** Specify any length up to 96" (standard lengths are 42", 84", 96")  
*NOTE: 84" and 96" are made to match net door height – specify.*

**Features:** Door edges are sized to be mortised into the surface of 1<sup>3</sup>/<sub>4</sub>" thick wood doors. Advise if your door is another thickness  
*NOTE: Some wood doors that are nominally 1<sup>3</sup>/<sub>4</sub>" vary significantly.*

- Options:**
- UL fire rated listed for stainless steel, brass and bronze. For use on wood or plastic faced fire doors rated up to and including 1<sup>1</sup>/<sub>2</sub> hours or hollow metal, steel covered, composite type fire doors rated up to and including 3 hours. Specify UL when ordering (300-UL)
  - Cutouts for flush bolts, lock strikes, locks, and hinges (see worksheets on pages C10-C11 or C13-C15 for details on how to order)

*NOTE: Your door thickness is a nominal dimension. Doors can vary + or - 1/16" from the nominal dimension. When ordering, verify actual door thickness to assure a working fit of the door edge.*

## Ordering Instructions

The use of door edges and armor plates not only offers superior protection to expensive doors, it also adds an attractive and functional finishing touch. Armor plates and door edges are available in all architectural finishes. The following two pages are intended to help you determine the cutout locations required on armor plates and door edges. Follow the steps listed to assure complete consideration of all factors concerning cutout locations.

- Determine the armor plate height. We recommend 48" high. If you cut holes for lock, make the armor plate high enough to provide at least  $\frac{1}{2}$ " from edge of the top cutout to the top edge of the plate, or  $\frac{1}{2}$ " above the top of the lock front when mortise lock is used. This prevents a cutout running out of the top edge of the plate.
- Determine the armor plate width. Armor plates are usually mounted on the stop or push side of the door. Measure the net width of the door face and subtract the following depending on the type of door edges you specify:
  - non-mortise door edges =  $2\frac{5}{8}$ " (for  $\frac{1}{8}$ " gap)
  - overlapping door edges = 2" (for  $\frac{3}{16}$ " overlap)
  - no door edges – single door =  $1\frac{1}{4}$ "
  - no door edges – pairs of doors = 1" (without mullions)
- List all hardware that will be mounted on the door. Identify those items that will require armor plate and/or door edge cutouts; i.e., lock spindle, cylinder, thumb piece, lock front and strike, flush bolts, hinges, louvers, lites.
- Determine door undercut and location of armor plate and door edge to bottom of the door. We recommend mounting plates flush with the bottom of the door.
- Determine location of all hardware cutout centerlines from the bottom of the armor plate.
- Determine the backset of lock cutouts on the armor plate.
 

		Square Edge	Bevel Edge
a) with non-mortise door edges	lock backset minus	$1\frac{5}{16}$ "	$1\frac{3}{8}$ "
b) with overlapping door edges	lock backset minus	1"	$1\frac{1}{16}$ "
c) without door edges – single doors	lock backset minus	$\frac{5}{8}$ "	$1\frac{1}{16}$ "
d) without door edges – pair of doors (without mullions)	lock backset minus	$\frac{3}{8}$ "	$\frac{7}{16}$ "
- Specify the size of cutouts.
- Determine the hand of the door. Armor plates are typically mounted on the stop or push side of the door. Function holes must be given special attention as they may not be required on reverse bevel doors.

**NOTE:** Your door thickness is a nominal dimension. Doors can vary + or -  $\frac{1}{16}$ " from the nominal dimension. When ordering, verify actual door thickness to assure a working fit of the door edge.

# Cutouts

This drawing shows typical location of cutouts on armor plates and door edges. It also illustrates non-mortise door edges, but this can be used as a guide for armor plates with overlapping door edges or no door edges. Use this as a worksheet to make your own drawings or photocopy and fill in your dimensions.

**For Hinge Cutouts:** Be sure to allow for door undercut and location of edge on door if other than flush with bottom.

**For Lock Trim Protection:** Consider using a trim protector bar (see pages C16-C20).

*NOTE: Your door thickness is a nominal dimension. Doors can vary + or - 1/16" from the nominal dimension. When ordering, verify actual door thickness to assure a working fit of the door edge.*

## Solutions to Door and Trim Damage

Damage to doors and door trim (exit devices, knobs, levers, etc.) from hallway traffic such as carts and gurneys cost hospitals, schools and other institutions tens of thousands of dollars every year. The following four pages are Rockwood Product's line of Unique, Patented Protection Products designed to prevent this damage. Made from solid stainless steel the line is engineered to deflect traffic safely away from the door or trim.

Our line of trim protector bars is designed to safely deflect traffic away from exit devices, door knobs/levers, or other trim. These bars are made from solid stainless steel and are available in both standard duty ( $\frac{3}{16}$ " ) and heavy duty ( $\frac{3}{8}$ " ) versions. The bars are mounted either directly below, over, or in front of the trim depending on the application. They are available in a variety of projections and center to centers to fit your needs. If you require custom designs our engineering department can work with you to meet your needs.

Choosing the correct protection bar:

1. **Determine traffic** – light to moderate use = SD Series, heavy use = HD Series.
2. **Measure projection** – of exit device, door knob, etc.
3. **Review product dimension** – to match bar to your specific needs.

**Warning:** Do not locate protection bars where they can impede operation of exit devices.

### How They Work

Without Bar – Costly Damage

With Bar – Safely Deflected Away

## Vertical Rod Cover

The vertical rod cover (BFRC) is a sturdy channel made of .050" stainless steel (other finishes available) designed to fit over the vertical rod, protecting it from damage caused by carts, gurneys, etc. It is available in 12" and 24" lengths.

## Latch Guard Cover

The latch guard cover (BFLG) is made of .050" material and is designed with a 45° ramp, which when placed over the latch at the base of the door, deflects traffic safely away. It meets ADA requirements for a "smooth bottom door surface". The BFLG is available in 10", 12", and 16" lengths and most architectural finishes.

## Application

Application shown for products BFRC and BFLG. Protects vertical rod and latch of exit device. Meets ADA "smooth surface" requirements.

## Introduction to Overhead Stops & Holders

Rockwood Overhead Stops and Holders are used to extend the life of the door, frame and any door closing devices. They may be necessary if there are strong winds, high traffic or abuse.

- When used in conjunction with a floor closer, you have absolute door control, top and bottom.
- Provides positive deadstop at selected degree
- There are 2 functions, 3 ways to order:
  - Hold Open** – door remains held open near deadstop location
  - Stops** – door deadstops at a particular degree of opening
  - Multi Function** – adaptable as hold open and/or stops
- Available as surface mounted or concealed
- Standard mount on push side of door (See model descriptions for pull side installations)
- Thru bolts are furnished with all surface models and must be used for installation

**WARNING: HOLD OPEN FUNCTION CANNOT BE USED ON LABELED OPENINGS!**

### To Convert from Hold Open to Stop Function:

1. Remove the plastic end cap (#1) at the spring end of the channel.
2. With  $\frac{3}{16}$ " hex key wrench, loosen the set screw in shock block.
3. Remove the shock block plate and the hold open spring from channel.
4. Remove the hold open spring from the shock block.
5. Replace the shock block and block plate into channel.
6. Replace the plastic end cap.
7. Install unit on door.
8. Adjust to desired opening and tighten set screw.

### To Select Degree of Stop (Hold Open Models):

1. Engage door in hold open position.
2. Using a  $\frac{3}{16}$ " hex wrench, loosen the set screw in the shock block.
3. Open door to desired degree of opening.
4. Tighten set screw.
5. Verify door opening position and re-adjust, if needed.

# Door Coordinators No. 2600 Series

**Material:** Steel

**Finishes:** Black, US28

**Fastener:** 7 ea. #12 - 24x1¼ TH type C tapping screws

**Size:** Standard device size 5/8" x 1 5/8" x 52"

**Features:** Non-handed. Override protection to prevent damage in case of abnormal force on door Mechanism and filler bar completely fill width of opening and when painted to match frame it becomes virtually invisible

**Ordering:** Stock Sizes

No.	Opening	Weight	ANSI A156.3
2660	60"	7.0 lbs.	Type 21A
2672	72"	8.0 lbs.	Type 21A
2696	96"	9.75 lbs.	Type 21A

**Custom Sizes** – The 2600 Series coordinators are manufactured in different housing lengths to coordinate the full range of door sizes:

- NX2600 Series: For jamb opening widths (A + B dimension) from 48" - 54". E dimension, 42"
- 2600 Series: For jamb opening widths (A + B dimension) from 54" - 96". E dimension, 52"

**Determining Coordinator Item Number**

- Active door widths A plus inactive door width B equals the last two or three digits of all 2600 Series coordinator item numbers (2680 is for 80" door opening)
- Less than 48" jamb widths = N2600 Series (N2644 = 44" opening).
- Larger sizes are available (L, XL). Contact the factory

*NOTE: 2600 Series Coordinators are designed so that surface vertical rod strike preps can be made directly into the coordinator body.*

No.	Jamb Widths	Coordinator Length	ANSI A156.3
NX2648- NX2654	48"-54"	42"	Type 21A
2655 - 2660	55" - 60"	52"	Type 21A
2661 - 2672	61" - 72"	52"	Type 21A
2673 - 2696	73" - 96"	52"	Type 21A

*Fillers are usually supplied precut from the factory (filler bars shown on page E14).*

*NOTE: If "S" dimension is other than 5/8" advise the factory.*
